

QUESTION PAPER - SET 8

SECTION 1 - PERSONAL DATA

1. Name

2. Mobile Number

3. Class 10 Overall Percentage

4. Class 12 PCM Percentage

5. What is your percentage in Pre Sea Training till 4th Semester?

6. Tell us about your strengths.

7. Tell us about your weaknesses.

8. Have you participated in any extracurricular activities during your Pre Sea Training? If

9. yes, share details.

10. Tell us about your family.

11. Where do you see yourself after 5 years?

SECTION 2 - COMPREHENSION PASSAGE

Archaeology as a profession faces two major problems.

First, it is the poorest of the poor. Only paltry sums are available for excavating and even less is available for publishing the results and preserving the sites once excavated. Yet archaeologists deal with priceless objects every day.

Second, there is the problem of illegal excavation, resulting in museum-quality pieces being sold to the highest bidder.

I would like to make an outrageous suggestion that would at one stroke provide funds for archaeology and reduce the amount of illegal digging. I would propose that scientific archaeological expeditions and governmental authorities sell excavated artifacts on the open market. Such sales would provide substantial funds for the excavation and preservation of archaeological sites and the publication of results. At the same time, they would break the illegal excavator's grip on the market, thereby decreasing the inducement to engage in illegal activities.

You might object that professionals excavate to acquire knowledge, not money. Moreover, ancient artifacts are part of our global cultural heritage, which should be available for all to appreciate, not sold to the highest bidder. I agree. Sell nothing that has unique artistic merit or scientific value. But, you might reply, everything that comes out of the ground has scientific value. Here we part company. Theoretically, you may be correct in claiming that every artifact has potential scientific value. Practically, you are wrong.

I refer to the thousands of pottery vessels and ancient lamps that are essentially duplicates of one another. In one small excavation in Cyprus, archaeologists recently uncovered 2,000 virtually indistinguishable small jugs in a single courtyard, even precious royal seal impressions known as melek handles have been found in abundance — more than 4,000 examples so far.

The basement of museums is simply not large enough to store the artifacts that are likely to be discovered in the future. There is not enough money even to catalogue the finds; as a result, they cannot be found again and become as inaccessible as if they had never been discovered. Indeed, with the help of a computer, sold artifacts could be more accessible than are the pieces stored in bulging museum basements. Prior to sale, each could be photographed and the list of the purchasers could be maintained on the computer. A purchaser could even be required to agree to return the piece if it should become needed for scientific purposes. It would be unrealistic to suggest that illegal digging would stop if artifacts were sold in the open market. But the demand for the clandestine product would be substantially reduced. Who would want an unmarked pot when another was available whose provenance was known, and that was dated stratigraphically by the professional archaeologist who excavated it?

1. The primary purpose of the passage is to propose

- A. an alternative to museum display of artifacts
- B. a way to curb illegal digging while benefiting the archaeological profession
- C. a way to distinguish artifacts with scientific value from those that have no such value
- D. the governmental regulation of archaeological sites
- E. a new system for cataloging duplicate artifacts

2. The author implies that all of the following statements about duplicate artifacts are true EXCEPT:

- A. A market for such artifacts already exists.
- B. Such artifacts seldom have scientific value.
- C. There is likely to be a continuing supply of such artifacts.
- D. Museums are well supplied with examples of such artifacts.
- E. Such artifacts frequently exceed in quality in comparison to those already cataloged in museum collections

3. Which of the following is mentioned in the passage as a disadvantage of storing artifacts in museum basements?

- A. Museum officials rarely allow scholars access to such artifacts.
- B. Space that could be better used for display is taken up for storage.
- C. Artifacts discovered in one excavation often become separated from each other.
- D. Such artifacts are often damaged by variations in temperature and humidity.
- E. Such artifacts' often remain uncatalogued and thus cannot be located once they are put in storage

4. The author's argument concerning the effect of the official sale of duplicate artifacts on illegal excavation is based on which of the following assumptions?

- A. Prospective purchasers would prefer to buy authenticated artifacts.
- B. The price of illegally excavated artifacts would rise.
- C. Computers could be used to trace sold artifacts.
- D. Illegal excavators would be forced to sell only duplicate artifacts.
- E. Money gained from selling authenticated artifacts could be used to investigate and prosecute illegal excavators

5. The author anticipates which of the following initial objections to the adoption of his proposal?

- A. Museum officials will become unwilling to store artifacts.
- B. An oversupply of salable artifacts will result and the demand for them will fall.
- C. Artifacts that would have been displayed in public places will be sold to private collectors.
- D. Illegal excavators will have an even larger supply of artifacts for resale.
- E. Counterfeiting of artifacts will become more commonplace

SECTION 3 - COMPREHENSION PASSAGE

The Sundarbans, located in the delta region of India and Bangladesh, is the largest mangrove forest in the world. It is home to diverse wildlife, including the famous Royal Bengal Tiger. The mangroves act as a natural barrier, protecting coastal areas from cyclones and storm surges. They also provide livelihoods for local communities through fishing, honey collection, and eco-tourism. However, climate change poses a serious threat to the Sundarbans. Rising sea levels, increasing salinity, and frequent storms are causing habitat loss.

Conservation projects are being implemented, focusing on planting more mangroves, reducing illegal logging, and promoting sustainable fishing practices. International cooperation is considered vital for the long-term preservation of this unique ecosystem.

1. Which of the following is NOT listed as a livelihood activity for local communities in the Sundarbans, according to the passage? (1 Point) Select the option that is not mentioned as a source of livelihood.

- A. Agriculture
- B. Honey collection
- C. Fishing
- D. Eco-tourism

2. Which of the following is a direct impact of climate change on the Sundarbans ecosystem? (1 Point) Select the option that best represents a climate change effect described in the passage.

- A. Increasing salinity of water
- B. Introduction of new wildlife species
- C. Growth in honey collection
- D. Expansion of fishing zones

3. What is one of the key protective roles played by the mangrove forests in the Sundarbans? (1 Point) Select the option that best describes how mangroves benefit the coastal environment.

- A. They increase the frequency of tidal waves.
- B. They are a major source of underground minerals.
- C. They supply drinking water to nearby villages.
- D. They act as a shield against cyclones and storm surges.

4. What is the primary objective of the conservation efforts described in the Sundarbans passage? (1 Point) Select the option that best reflects the main goal of these projects.

- A. To increase honey production for export
- B. To encourage local communities to move to urban areas
- C. To restore and safeguard the mangrove forests and their biodiversity
- D. To expand commercial fishing operations

5. Why does the passage emphasize the necessity of international cooperation for preserving the Sundarbans? (1 Point) Select the option that best explains the importance of cross-border collaboration.

- A. The Sundarbans ecosystem spans across India and Bangladesh, requiring joint efforts.
- B. Local communities are unwilling to support conservation projects.
- C. The region attracts international tourists who fund conservation.
- D. Climate change is only a concern for a few developed countries.

SECTION 4 - ENGLISH APTITUDE

1. What is Software Testing?

- a) Analyzing documentation
- b) Writing code
- c) Executing a system to identify bugs and errors
- d) Compiling source code

2. Which of the following is NOT a principle of software testing?

- a) Testing shows the presence of defects
- b) Testing is best done only at the end of development
- c) Early testing saves time and cost
- d) Exhaustive testing is impossible

3. What is the difference between verification and validation?

- a) Verification checks if the product is built correctly, validation checks if the product is correct
- b) Verification is testing, validation is documentation
- c) Verification is about testing the product in the real world, validation is done by developers
- d) There is no difference

SECTION 5 - NUMERICAL APTITUDE

1. What is Regression Testing?

- a) Testing only new features
- b) Conducting user interface checks
- c) Validating database constraints
- d) Re-testing existing code to ensure new changes don't affect functionality

2. What is the role of a test manager?

- a) To write code for the software
- b) To deploy the software to production
- c) To develop the test environment
- d) To oversee the testing process and ensure test cases are executed

3. What is User Acceptance Testing (UAT)?

- a) Debugging system errors
- b) Running automated test execution
- c) Validating business requirements with end-users
- d) Testing system architecture

SECTION 6 - MARITIME KNOWLEDGE

1. What does “port side” mean on a vessel?

- A. Right side
- B. Left side
- C. Front side
- D. Upper deck

2. Which emergency signal indicates abandoning ship?

- A. Continuous ringing of bell
- B. Seven short blasts followed by one long blast
- C. Three prolonged blasts
- D. Morse code SOS only

3. What is the function of a ship’s rudder?

- A. To increase stability
- B. To change the ship’s direction
- C. To reduce rolling
- D. To measure speed

4. What does SOLAS stand for?

- A. Safety of Life at Sea
- B. Security of Life and Ships
- C. Standard Operations for Large Ships
- D. Safety Operations and Life Saving

5. Ventilators forming part of Conditions of Assignment must:

- A. Be of any height if fitted with wire mesh
- B. Have minimum height and efficient closing appliances
- C. Have closing devices only above superstructure decks
- D. Be permanently open for machinery ventilation

6. When approaching a danger marked by a Cardinal buoy, the vessel should:

- A. Pass on the port side
- B. Pass on the starboard side
- C. Keep to the side named by the buoy
- D. Keep the buoy on the vessel's port side

7. Which side of a vessel is indicated by a green navigation light?

- A. Port side
- B. Starboard side
- C. Stern
- D. Masthead

8. The vertical distance between the upper edge of the deck line and the centre of the load line disc represents the:

- A. Summer Freeboard
- B. Summer Draft
- C. Fresh Water Allowance
- D. Winter North Atlantic Freeboard

9. Which document contains detailed information about cargo carried on a vessel?

- A. Deck Log Book
- B. Cargo Manifest
- C. Engine Log Book
- D. Stability Booklet

10. What is the standard distress frequency used in marine VHF communication?

- A. Channel 6
- B. Channel 13
- C. Channel 16

D. Channel 21

11. What is the purpose of a ship's whistle or horn?

- A. Entertainment
- B. Distress communication only
- C. Navigational sound signaling
- D. Engine warning

12. Which factor causes the settling error of a gyrocompass to become more pronounced?

- A. Operating at higher latitudes
- B. Operating at lower latitudes
- C. Increasing the vessel's speed
- D. Navigating in areas of high magnetic variation

13. What is the primary purpose of a ship's freeboard?

- A. To increase cargo capacity
- B. To improve engine efficiency
- C. To provide reserve buoyancy and safety
- D. To reduce fuel consumption

14. What is the SI unit used to measure atmospheric pressure?

- A. Knot
- B. Pascal
- C. Joule
- D. Newton

15. In the Northern Hemisphere, what is the typical direction of wind circulation around a low-pressure area?

- A. Anticlockwise and inward
- B. Clockwise and inward
- C. Clockwise and outward
- D. Anticlockwise and outward

16. Which safety equipment is used to prevent drowning during emergencies?

- A. Compass
- B. Lifebuoy
- C. Sextant
- D. Radar reflector

17. The observer's prime vertical passes through the east and west points of which of the following?

- A. Rational horizon
- B. Equinoctial
- C. Celestial meridian
- D. Great circle

18. What does the term "lee shore" refer to in seamanship?

- A. A shore protected from wind
- B. A shore facing the wind
- C. A dangerous shore onto which wind blows
- D. A shallow coastal area

19. Which frontal type is MOST commonly associated with the process shown in the diagram?

- A. Stationary front
- B. Warm front
- C. Cold front
- D. Occluded front

20. What does the term "angle of loll" describe in ship stability?

- A. The angle at which the center of gravity is vertically above the center of buoyancy
- B. The time taken for a vessel to complete one roll cycle
- C. KM is greater than GM
- D. The heel angle at which a vessel with negative GM achieves equilibrium due to hull

shape

21. How should a newly issued Preliminary Notice to Mariners (P-Notice) be marked on a nautical chart?

- A. In red marker
- B. Lightly in pencil
- C. In permanent ink
- D. Not marked until confirmed

22. What is the main purpose of a ship's anchor?

- A. To increase vessel speed
- B. To hold the vessel in position
- C. To improve fuel efficiency
- D. To reduce rolling motion

23. What is the primary purpose of a marine sextant?

- A. Measuring wind direction
- B. Determining celestial altitude
- C. Measuring sea depth
- D. Determining engine power

24. On a nautical chart, which color is commonly used to indicate shallow water and the boundaries of certain regulated areas?

- A. Gold
- B. Blue
- C. Black
- D. Green

25. Which type of weather front is most commonly linked to severe thunderstorms, heavy rain, and sudden gusty winds?

- A. Cold front
- B. Occluded front
- C. Warm front

D. Stationary front

26. In celestial navigation, what is the First Point of Aries () primarily used to measure?

- A. Measuring True Altitude
- B. Measuring Azimuth
- C. Measuring Right Ascension
- D. Measuring Longitude

27. At what temperature does the air reach saturation, causing water vapor to begin condensing into liquid droplets?

- A. Temperature at which air becomes saturated
- B. Temperature of condensation clouds
- C. Lowest night temperature
- D. Temperature at which rain begins

28. According to ship safety regulations, which of the following must be made weathertight as part of the Conditions of Assignment?

- A. Hatchways situated on the freeboard deck
- B. Sounding pipes on deck
- C. Cargo hold ventilators below deck
- D. Scuppers above deck

29. What does “starboard” refer to on a ship?

- A. Left side
- B. Front side
- C. Right side
- D. Rear side

30. At which location on Earth does the Coriolis effect reach its greatest strength?

- A. At the Equator
- B. At the Tropics

C. At 30° latitude

D. At the Poles
